Fig.2 Start rctrieving identifier a simple object source length a simple object size retrieving retrieving simple · biject type retrieving simple · bject value allocating memory in memory location packed copying the simple object size, type and value into packed memory a simple head value and exit value retrieving simple copying the simple head value and exit value into packed memory packed memory End

Fig. 3 Start retrieving a complex object source identifier length retrieving a complex object field type retrieving a complex object field value complex object retrieving a Size field allocating memory in a packed of 50 memory location copying the complex object field type, field stee and field value into packed memory retrieving a complex head value and a complex exit value copying the complex head valve and exit value into packed memory

Fig. 4

Start retrieving a list object source identifier length allocating memory in a packed memory location retrieving list object array list object array copying the list ob into packed memory the retrieving list head value and list exit value list head and exit the copying into pucked memory End
